Wei-Hung Weng, MD, PhD

California, USA
ckbjimmy [AT] gmail [DOT] com

Professional Summary

Research Scientist and Medical Doctor with a PhD in Computer Science from MIT, specializing in AI for science and medicine. Leverages extensive clinical experience to lead and contribute to cutting-edge AI projects, with a focus on developing novel multi-agent systems, deep learning models, and natural language processing techniques to advance scientific discovery and healthcare.

Work Experience

- Research scientist, Google DeepMind / Google Research, 2022/3 – Present
    - Developed a novel AI co-scientist, a multi-agent system built on a large language model designed to generate novel, testable scientific hypotheses and research proposals. The system has been validated through wet-lab experiments in multiple biomedical domains.
    - Developed AMIE (Articulate Medical Intelligence Explorer), a multimodal conversational AI system for medical diagnosis and management reasoning.
    - Developed Med-Gemini, a family of specialized large language models for medicine based on Gemini.
    - Developed a LLM-aligned representation learning method for chest X-ray images, improving performance on downstream tasks such as image retrieval and question answering.
    - Developed and validated a deep learning model for predicting cardiovascular disease risk from photoplethysmography signals, achieving performance comparable to established clinical risk scores.
    - Developed Health-enhanced Acoustic Representation (HeAR), a self-supervised learning model for health-related acoustic signals, demonstrating state-of-the-art performance on downstream health tasks.
- Research assistant, MIT Computer Science and Artificial Intelligence Laboratory (CSAIL), 2017/9 – 2022/5
    - Systematically explored the machine learning frameworks for limited data, data imbalance, and heterogeneous data, using cross-domain learning, self-supervised learning, contrastive learning, meta-learning, multitask learning, and robust learning.
- Postdoctoral research fellow, Massachusetts General Hospital, 2015/9 – 2017/5
    - Developed a machine learning, natural language processing based technique and knowledge representation for clinical triage and undiagnosed disease identification.
- Research associate, National Taiwan University, 2014/5 – 2015/4
    - Developed the qualitative and deep learning methods to identify skin melanocytes in microscopic imaging.
- Resident physician (general medicine, pathology), Chang Gung Memorial Hospital, 2012/8 – 2014/4

Education

- PhD in Computer Science, 2022
    - Massachusetts Institute of Technology, Cambridge, MA, USA (Supervisor: Peter Szolovits)
- MMSc in Biomedical Informatics, 2017
    - Harvard Medical School, Boston, MA, USA (Supervisor: Henry Chueh)
- MD, 2011
    - Chang Gung University, Taiwan
